                                                 1
   [1] 3 5 6 9 10 12 15 18 20 21 24
## [1] 143
## [1] 111
 12. The output would result into an error because the variable x is used before it was assigned a value
 13.
score <- c(72, 86, 92, 63, 88, 89, 91, 92, 75, 75, 77)
score[2]
```

[1] 86

```
score[3]
## [1] 92
 14.
a \leftarrow c(1, 2, NA, 4, NA, 6, 7)
  a.
print(a, na.print = "-999")
## [1]
           1
                2 -999
                           4 -999
                                      6
                                           7
  b. The output displays the vector 'a' with NA values replaced by "-999"
 15.
name <- readline(prompt = "Input your name: ")</pre>
## Input your name:
age <- readline(prompt = "Input your age: ")</pre>
## Input your age:
print(paste("My name is",name, "and I am",age ,"years old."))
## [1] "My name is and I am years old."
print(R.version.string)
## [1] "R version 4.4.1 (2024-06-14 ucrt)"
```

The output displays the personalized message based on the user's input, followed by the current R version string.
